ABOUT

Hi, I'm Emirhan Gozukucuk, a frontend developer with intensive training in HTML, CSS, JavaScript, and React and experience in freelance projects. In a dynamic team environment, I understand the value of teamwork more and more every day. With my attention to detail, desire to write clean code and problem solving ability, I am constantly improving myself in the field of frontend development. With my passion for creating innovative user experiences, I am ready to contribute to your projects and grow together by working with you in a full-time position.

REFERENCE

Orhan Ekici - Acunmedya Academy
Software Department Head

Iskender Kara - Trattoria Enzo

Contact details of my references are available and I will be happy to share them if needed.
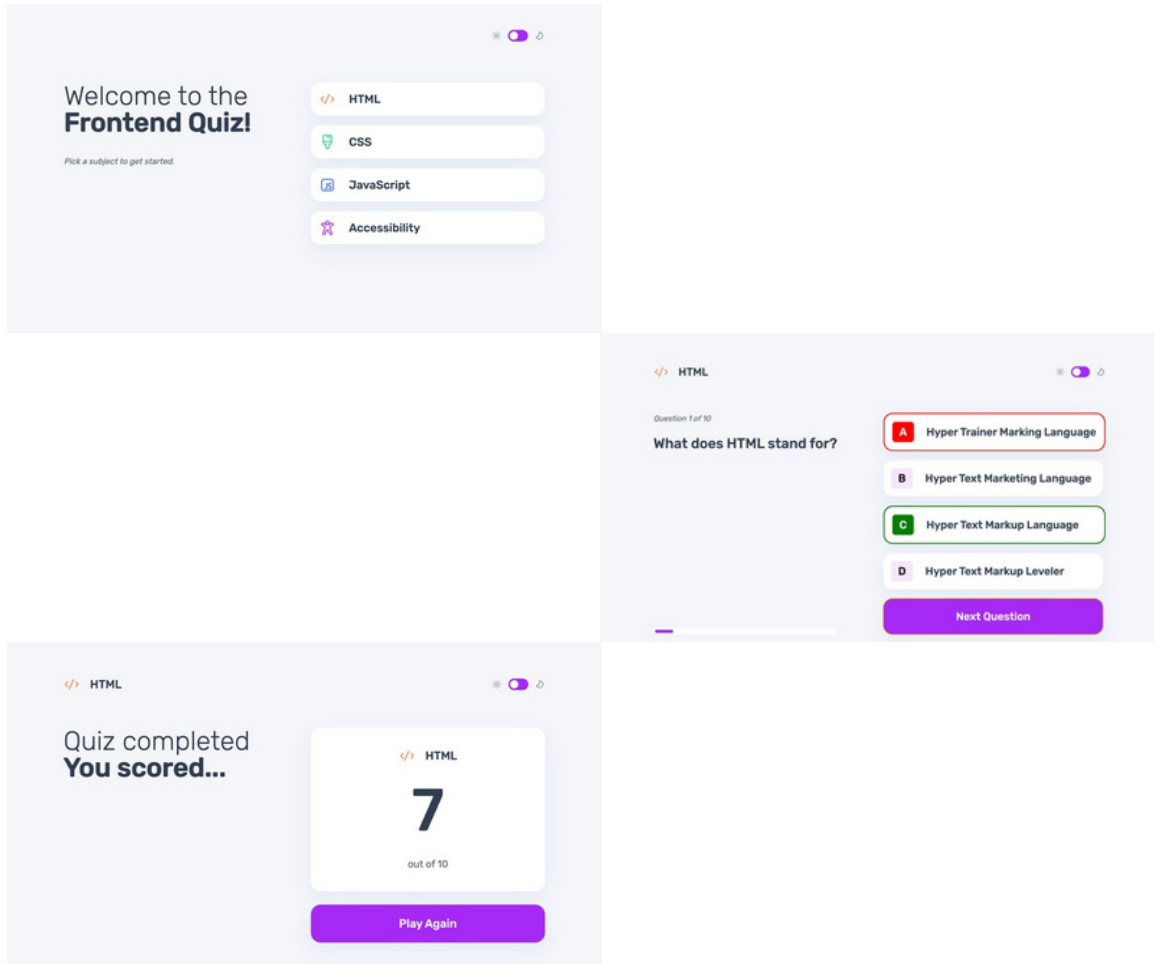

PROJECT

You can visit my portfolio to examine the projects I have realised during my Frontent Expertise training.

In my project, using the useState hook, I have created a questionnaire consisting of a total of 40 questions in 4 different categories. When participants answer the questions correctly, they will receive a green are highlighted with a frame. Incorrect answers are marked with a red frame, while the correct answer is indicated by a green frame. At the end of the quiz, the question that users answered correctly with a scoreboard showing the number of points scored.

PHOTOSNAPE WEB PAGE

Create a layout for the fixed parts of the application using React's facilities
I created it so that users can navigate seamlessly between different pages.
for React Router, and I integrated useState to manage pricing options.
I used the hook. In some parts of the design, there are a few things

DICTIONARY

HTML - CSS - REACT

The word the user wants to search for is stored in a variable using useState. When there is a change in this state, useEffect is triggered and the word entered from the API detail information is fetched with fetch and this information is kept in a different state. The word I did a custom validation for the input where the word was entered. state is again managed using useState. Apart from this, the application uses font and color mode can also be changed.
